

# Weekly Coal Production

Production for Week Ended:  
January 4, 1992

**IMPORTANT NOTICE INSIDE**  
Export/Import  
Supplement

# NOTICE

The Energy Information Administration is not planning to publish monthly coal and coke import/export data after the December 1991 data are published in this report in March 1992. The monthly coal and coke import/export data, shown in Tables 3 through 15 of this report, will be available by quarter in the Quarterly Coal Report.

# Preface

The *Weekly Coal Production (WCP)* report provides weekly estimates of U.S. coal production by State. Supplementary data are usually published monthly in two supplements: the Coal Exports and Imports Supplement and the Domestic Market Supplement. This week's Coal Exports and Imports Supplement contains detailed monthly data on U.S. coal and coke exports and imports. The Domestic Market Supplement contains detailed monthly electric utility coal statistics, by Census Division and State, for generation, consumption, stocks, receipts, sulfur content, prices, and the origin and destination of coal shipments. This supplement also contains summary-level, monthly data for all coal-consuming sectors on a quarterly basis.

Preliminary coal production data are published quarterly, based on production data collected using Form EIA-6, "Coal Distribution Report." Based on 1988 through 1990 data, the coal production estimation error for a quarter at the national level (i.e., the difference between the sum of the weekly estimates for a quarter and the quarterly EIA-6 preliminary data) ranges from 1 percent to 4 percent for 1988, 1 percent to 2 percent for 1989, and 0.3 percent to 3 percent for 1990.

Final coal production data are published annually, based on the EIA-7A coal production survey. Based

on 1988 through 1990 data, the revision error for a quarter at the national level (i.e., the difference between the EIA-6 preliminary data and the EIA-7A final data) ranges from 0.02 percent to 0.08 percent for 1988, 0.09 percent to 0.14 percent for 1989, and 0.01 percent to 0.05 percent for 1990. Usually the EIA-7A coal production data are higher than the EIA-6 coal production data, due to differences in the threshold reporting requirements.

This publication is prepared by the Survey Management Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as specified in the Federal Energy Administration Act of 1974 (P.L. 93-275) as amended. *Weekly Coal Production* is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly *Coal Distribution*, the *Quarterly Coal Report*, *Coal Production 1990*, and *Coal Data: A Reference*.

This publication was prepared by Wayne M. Watson under the direction of Mary K. Paull, Team Leader, Coal Data Systems, and Noel C. Balthasar, Chief, Coal and Uranium Data Systems Branch. *Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at 202/586-8800.*

**Distribution Category UC-98**

**Released for printing January 10, 1992**

This report was prepared by the Energy Information Administration, the independent statistical and analytical agency within the Department of Energy. ## Summary

U.S. coal production in the week ended January 4, 1992, as estimated by the Energy Information Administration, totaled 15 million short tons. This was 16 percent more than in the previous week, which included the Christmas Day holiday, and 5 percent higher than in the comparable week in 1991. Production east of the Mississippi River totaled 8 million short tons, and production west of the Mississippi River totaled 7 million short tons.

U.S. coal exports in October 1991 totaled 9 million short tons, raising the total amount of coal exported in the first 10 months of 1991 to 89 million short tons. This was 1 million short tons higher than the amount exported in the comparable period of 1990, primarily reflecting increased steam and metallurgical coal exports to Europe. Coal export prices during the period remained essentially unchanged, compared with the same period of 1990. Coal exports for the first 10 months of 1991 were valued at \$3.8 billion. Over one-half of the exported coal was shipped from the Norfolk, Virginia, Customs District, which has handled 8 percent more export coal in 1991 compared with a year earlier.

Steam coal exports during the first 10 months of 1991 declined 1 million short tons (3.4 percent) below their level in the comparable period of 1990. Canada, the

principal destination for U.S. steam coal exports, received 5 million short tons less coal than in 1990. Exports of steam coal to Europe rose nearly 4 million short tons above the same period of 1990. France, Spain, and the Netherlands accounted for over two-thirds of the increase. Taiwan was the leading Asian destination, with 3 million short tons, a decline of 8 percent from 1990.

Metallurgical coal exports rose 3 percent to total 55 million short tons during the first 10 months of 1991, compared to the corresponding 1990 level of 53 million short tons. Japan continued as the largest importer of U.S. metallurgical coal, but imported 1 million short tons less compared with the same period in 1990, due in part to increased competition from Australia and Canada suppliers. Europe, however, imported 2 million short tons more over this period, led by higher metallurgical coal demand in France, the United Kingdom, and the Netherlands.

During the first 10 months of 1991, 3 million short tons of coal were imported into the United States, 30 percent above the level a year earlier. Colombia was the leading source of imported coal, accounting for over one-half of the total. Based on an average price of \$33.16 per short ton, total coal imports were valued at \$95 million.
